

To Whom It May Concern:

I am a student of Greg Jameson's WordPress Certificate Program at Arapahoe Community College and I would like to speak on behalf of his teaching expertise in the area of computers and web development. I attended three courses taught by Greg Jameson in the Fall of 2018 on the topic of web site design using the commercial program called WordPress.

I greatly enjoyed the course and thought Greg Jameson did an excellent job at presenting material and having students actively learn the material using their own computers. Greg introduced the software to the class and then proceeded to lead the class in the development of their own website using the many features of the software including plugins, WooCommerce, widgets and themes.

The information presented was timely and relevant to the current technology in web site design. Greg did his best to cover all topics relevant to web site design including security and the latest Gutenberg editor changes to the WordPress software release. When teaching technology course, it is always important to keep up with the latest and most relevant technology developments. Greg was able to present a course which was engaging, relevant and technologically challenging!
